To whom it may concern:

The California Safe Drinking Water and Toxic Enforcement Act of 1986, also known as Proposition 65 (Prop 65), establishes a list of chemicals which the state of California's risk assessment process has determined to present a risk of cancer, birth defects or other reproductive harm.

National Technology, Inc. is a Printed Circuit Board manufacturer which constructs bare boards per customer's specifications and requirements. Dependent on the requirements of our customer, the printed circuit boards may contain "Chemicals" (in their elemental form) as listed in Proposition 65. The following is a list of the noted chemicals and the requirement that uses it.

The Following are Listed in Proposition 65	
<i>Chemical name as listed</i>	<i>Customer requirement where used</i>
Lead	Lead is used in the HASL Final Finish (63/37 Hot Air Solder Leveling)
Nickel (Metallic)	Nickel is used in the ENIG Final Finish (Electroless Nickel / Immersion Gold)
Nickel (Metallic)	Trace Nickel is used in the LF-HAL Final Finish (Lead Free Hot Air Leveling)
Nickel (Metallic)	Nickel is used in Nickel / Gold Tab plate
Nickel (Metallic)	Nickel is used in Hard Gold applications

Printed Circuit Boards provided by National Technology, Inc. (all locations) are not intended for exposure to humans. The elements that are on these boards are released under normal operating conditions. To the best of our knowledge, any of the circuit boards NOT containing the above listed chemical would be considered compliant to the California Safe Drinking Water and Toxic Enforcement of 1986 as updated 25 February, 2022.
